

## TIM-DEF-49 Stainless steel automatic nozzle - (3/4" barb inlet)

Recommended handling practices:

1. Keep totes out of heat and direct sunlight for storage and use.
2. Develop a periodic maintenance program to spray down areas where DEF has crystallized with a spray water bottle and rag.
3. Prevent the dispensing nozzle from becoming clogged with buildup. Remove from hose and soak entirely in warm water, then reattach and rinse.
4. Keep product above the extreme minimum of 12°F: preferably above 20°F and below 86°F.

**NOTE: The only replacement part available is the TIM-49-SWIVEL**
